

Think about light at night

We need to see and to be seen in the dark. There are different kinds of light sources to help us to keep safe.

There are lights on streets, cars and bicycles. There are lights on tall bridges and buildings. Airports use lights to help aeroplanes to find their way.

Where do we use torches?

How does a torch work?

Lights for safety

Special clothing that reflects light helps to light up people at night.

At night, lights on a runway light up a path to help aeroplanes take off and land.

Where else does lighting help to keep people safe?
