Factors

A factor is a number which, when multiplied with another number, produces a whole number.

For example, 5 and 6 are factors of 30. So are 3 and 10.
5 × 6 = 30 and 3 × 10 = 300.

Any number that **goes exactly** into 30 will be a factor of 30.

Look at the numbers in the middle of each big X. Circle the factors of the number in the middle of each big X.

8 4 16 19 28 17 **64** 30 7 18 34 9 32	2 7 4 11 10 1 **12** 12 9 5 6 8 3
