The challenge of natural hazards

- 1 What is a natural hazard?
- 2 Give two ways in which you can reduce the effects of tropical storms.
- 3 Describe the global distribution of earthquakes and volcanoes.
- 4 Describe the benefits of living next to a plate margin.
- 5 Describe the formation of a tropical storm.
- 6 Assess the extent to which long-term responses are more significant than intermediate responses.
- 7 Explain why volcanoes are formed at destructive plate margins.
- 8 Explain how solar activity can affect global climate change.
- 9 Explain how humans contribute to an increase in carbon dioxide in the atmosphere.
- 10 Using a named example, explain the effects of an earthquake.
- 11 Using a named example, explain the effects of an extreme weather event in the UK.
- 12 'A developing country is likely to be more affected by an earthquake than a developed country'. To what extent do you agree with this statement?
