

Paper 1

- 1 a State the formula for calculating the kinetic energy of a moving object. (1 mark)

.....

A dog is chasing a cat in a field. Both the dog and cat are running at a steady speed of 10m/s. The cat has a mass of 3kg and the dog has a mass of 8kg.

- b Calculate the energy in the kinetic store of the cat. (2 marks)

.....
.....

- c Calculate the energy in the kinetic store of the dog. (2 marks)

.....
.....

- d The dog accelerates to a new steady speed and increases the energy in its kinetic store to 576J. Calculate the dog's new speed. (4 marks)

.....
.....
.....
.....

- e The cat maintains the same speed of 10m/s. The cat is 10 metres ahead of the dog. Calculate the time it takes for the dog to catch the cat. (2 marks)

.....
.....
