

Blend Or pretend

How do these tricks help animals to stay alive?

Play dead

Most predators eat prey that is alive. This bird is playing a trick by looking dead!

Disguise

The octopus changes colour to look like sand, rocks or coral. It can also change shape to look like a dangerous animal.

Pretend

The orange viceroy butterfly looks almost like a monarch butterfly. Hungry birds know that monarchs taste bad.

Blend

The stonefish hides itself in sand. It takes its prey by surprise.

Attack

A spider creates a web that its prey cannot see. It waits for insects to fly into it. The insect gets stuck and can't escape.
